How to See What Your ZeroGhost™ Vault Is Blocking

Your Vault automatically blocks ads, trackers, and known malicious websites for every device on your network. This guide shows you how to log in and see it working (Basic), and how to dig into the details (Advanced).

You'll need your password. It's the same one you use to connect to your Vault's WiFi, and it's on your setup card. Don't have it? Contact **support@zeroghost.com**.

Basic: Log In and See What's Being Blocked

Step 1: Open the blocking dashboard

1. Make sure your device is connected to your Vault's WiFi.
2. Open a web browser and go to: **192.168.8.1:3000**
3. Type it exactly, including the **`:3000`** at the end.
4. Log in with your password (the same one you use for your WiFi).

Step 2: Read your dashboard

The main screen shows you, at a glance:

- **DNS Queries:** the total number of requests your devices have made
- **Blocked by Filters:** how many of those were ads, trackers, or dangerous sites that got stopped
- **Top blocked domains:** the specific ad and tracking servers being blocked most often (you'll often recognize names from big tech and advertising companies)
- **Top queried domains:** the sites and services your network uses most

If you see numbers climbing in "Blocked by Filters," your Vault is doing its job, quietly protecting every device on your network.

What's being blocked, in plain terms

- **Ads:** banner ads, pop-ups, and video ad trackers across apps and websites
- **Trackers:** the hidden scripts that follow you around the internet and build a profile on you
- **Malware and phishing:** known dangerous websites that try to steal your information or infect your devices

You don't need to do anything to keep this running. It works automatically in the background.

Advanced: Explore the Details

Once you're logged in at **192.168.8.1:3000**, you can go beyond the summary.

Query Log

Click **Query Log** in the top menu. This is a live, detailed feed of every request your network makes and whether it was **allowed** or **blocked**. You can:

- Watch blocking happen in real time
- Search for a specific website or device
- See exactly which trackers an app or site tried to reach

Filters

Click **Filters** to see the blocklists your Vault uses to decide what to stop. These are what power your protection.

A note on changing settings

Your Vault is pre-configured for maximum privacy and security before it ships. We recommend leaving the filtering settings as they are. Viewing the dashboard and query log won't change anything.

If you'd like to customize blocking, for example allowing a specific website that you trust, reach out to **support@zeroghost.com** and we'll walk you through it safely.
